

4-port network patch panel

AI Overview

A four-port network patch panel is a compact device that organizes and terminates network cables, supporting up to four connections for structured cabling in home or office networks.

Overview

A four-port patch panel serves as a central point to manage Ethernet or other network connections. It allows multiple devices to connect to a network efficiently, providing a neat and organized solution for cabling. Each port typically accepts a keystone module, which can be RJ45 for Ethernet, or other types like HDMI, USB, or fiber connectors depending on the panel design .

Key Features

- **Compatibility:** Supports various keystone modules including Cat5e, Cat6, Cat6a, and Cat7 for Ethernet, ensuring backward compatibility with older cabling standards .
- **Data Transmission:** High-quality panels can support speeds up to 10 Gbit/s and frequencies up to 500 MHz, suitable for high-speed networks .
- **Shielding:** Some models feature shielded designs to reduce electromagnetic interference (EMI) and maintain signal integrity .
- **Mounting Options:** Can be mounted on walls, desks, or DIN rails, depending on the model. Snap-in or clip systems simplify installation .
- **Cable Management:** Adjustable ratchet locks or snap-in technology help organize cables without additional ties, reducing clutter and installation time .
