

A pair of fiber optic patch cords

AI Overview

A pair of fiber optic patch cords consists of two pre-terminated fiber cables used to connect network devices or infrastructure, available in various fiber types, connector types, and lengths.

Overview

A fiber optic patch cord (also called a fiber jumper) is a cable with fiber optic connectors at both ends, designed to connect devices such as switches, routers, servers, or fiber transceivers, or to link into fiber optic infrastructure cabling . A pair typically includes two cords, allowing bidirectional communication or redundancy in a network setup.

Fiber Types

Patch cords are available in single-mode (SM) and multimode (MM) fibers:

- Single-mode (OS1/OS2): Ideal for long-distance transmission and high-speed networks .
- Multimode (OM1, OM2, OM3, OM4, OM5): Suitable for shorter distances, data centers, and LANs .
- Bend-insensitive fibers (G.657A1/A2): Useful for tight spaces and FTTH applications .

Connector Types

Common connectors include:

- LC, SC, ST, FC: Standard connectors for most networking equipment .
