

Cables are secured at the end of the cable tray

Overview

Answer: Yes; cables are tied down in cable trays to keep the cables in the cable tray, to maintain spacing between cables, or to segregate or confine certain types of cables to specific locations. The last two items can also be accomplished with a solid fixed barrier. The primary rulebook used in the safe use of cable trays is NEC Article 392. This is a description of how to select, install, and support these metal or plastic frames, on which electrical wires are installed. You should consider it as a series of instructions that make the buildings resistant to. An electrical cable tray system serves as a rigid structural raceway designed to support and route electrical cables and wires. Properly managing cables in these trays ensures the smooth functioning of electrical systems, minimizes downtime, improves maintenance efficiency, and guarantees. Cable tray shall be permitted to be used as a support system for wiring methods containing service conductors, feeders, branch circuits, communications circuits, control circuits, and signaling circuits.
