

Circular Instrument Bridge

Overview

The Laguna Garzón Bridge is a crossing the in, on the border between the and departments. The bridge is famous for its unusual circular shape and was designed by Uruguayan architect. It is designed in a circular shape to force drivers to slow down, and allows for pedestrian access along the one-way circular route, including that allow access to eit. Bridges may consist of a single piece of material, most commonly wood for violins and acoustic guitars, that fits between the strings and the resonant surface. Alternatively, a bridge may consist of multiple parts. One common form is a bridge with a separate bearing surface, called a saddle, that supports the strings. This is often of a material harder than the bridge itself, such as bone, ivory, high-density plastic, or metal. Som.
