

Distribution Network Automation Online Monitoring System

Overview

ADMS provides distribution utilities with real-time monitoring and control, network analysis, network optimization and outage management capabilities in an integrated software architecture, enabled by a high-performance, scalable, and cybersecure SCADA platform. Ensure an efficient, stable, secure and sustainable power supply and. The Power Distribution Overhead Line Monitoring System comprises sensors, concentrators, the data analytic platform, and AI algorithm modules. It is designed for real-time monitoring of power distribution lines, performing fault detection, fault waveform recording, fault section pinpointing, risk. Web-based Distribution Monitoring Software (EMS) designed and manufactured for reading, remote control and information management of Distributed Post Meters. Control your supply infrastructure with confidence and benefit. Compass is an AMI analytics and Grid Edge Visibility platform for electricity distribution utilities.
