

Exposed Small Distribution Box

AI Overview

An exposed small distribution box is a compact, surface-mounted enclosure designed to house circuit breakers or fiber connections, providing easy access and protection for electrical or network installations.

Overview

An exposed small distribution box is typically a surface-mounted unit that allows the internal components to be accessed without opening additional doors or panels. These boxes are often made from flame-retardant ABS+PC or halogen-free materials, offering impact resistance, dustproofing, and UV stability for durability in both indoor and outdoor environments . They are designed to accommodate a range of modules, from a few slots up to 42, depending on the model .

Features

- **Protection and Safety:** Many boxes provide IP30 to IP40 protection, shielding internal components from dust and minor contact while ensuring safety for users . Some models include transparent covers for quick inspection .
- **Modular Design:** Boxes often feature DIN rails or mounting rails (TS35 type) for easy installation of circuit breakers or fiber modules, allowing flexible configuration .
- **Ease of Installation:** Surface-mounted design allows quick wall or surface installation with included brackets and screws, making them suitable for homes, workshops, basements, or outdoor setups like solar panels and charging stations .
- **Capacity:** Depending on the model, small distribution boxes can support 1-42 modules, with options for pre-terminated fiber connections or electrical circuits .
