

Fiber Optic Panel 1200mm Depth Retail

AI Overview

High-density fiber optic panels with sliding or fixed trays can be deployed in 1200mm deep racks, supporting LC, SC, or MPO connections for retail and commercial environments.

Panel Types and Features

1. Sliding and Fixed Fiber Panels

- Panels like CommScope's FPX series and Excel's Enbeam range offer sliding drawer or tray-style housings, allowing easy access for splicing or direct termination of fibers. These panels support 1U, 2U, or 4U rack heights and can accommodate 24 to 144 fibers depending on the configuration, making them suitable for high-density retail deployments (CommScope, Excel) .

- Sliding trays simplify maintenance and expansion, while fixed panels provide cost-effective installation for stable network setups.

2. High-Density and UltraSlim Panels

- AFL's UltraSlim 1RU V-Panel BASE-12 is designed for high-density cabling in shallow or deep racks, offering 144 fibers in 1U. Its V-shaped front and rear cable management ensures neat routing, and it supports LC QUAD adapters for smooth patching. Low-loss MPO and LC versions are available for high-speed networks (AFL) .

- These panels are ideal for racks with 1200mm depth, providing sufficient space for cable bend radius and management.

3. Connector and Fiber Options

- Panels support LC, SC, and MPO/MTP connectors in singlemode or multimode configurations.
