

Fiber optic cable tray made of aluminum alloy

Overview

Aluminum alloy cable tray is made of aluminum alloy through extrusion molding. These structures, typically made from materials such as steel, aluminum, or fiberglass, are designed to support and protect cables, wires, and. Designed to withstand the toughest environments, our cable ladders offer a robust, reliable, and versatile solution that ensures your cables are supported with the highest standards. Products are exported all over the world. For example: Europe, America, Middle East, North Africa, Southeast Asia. The Hengchang FR2 optical fiber cable tray system is constructed from high quality aluminum alloy profiles to act as a channel for fiber placement in various optical wiring systems. This article explores the design, benefits, installation practices, and real-world applications of aluminum alloy cable. Aluminum cable tray has a simple structure, novel style, large load-bearing capacity, light weight, corrosion resistance, long service life, and easy installation, suitable for general environmental areas.
