

Fixing clips inside the cable tray

AI Overview

Clips inside a cable tray secure cables safely, prevent movement, and maintain organization using appropriate clamps, ties, or rod-mounted supports.

Types of Clips and Supports

- **Rod Clips and Spring Clips:** These are used to attach small cable containment to threaded rods, providing support for cable trays, baskets, or trunking with arms typically around 68mm long .
- **Cable Tray Clamps:** Heavy-duty clamps, often made from copper alloy or zinc-plated steel, can hold cables directly on the tray surface or attach the tray to beams and channels. They are designed to handle loads up to 300-400 lbs and can include grounding options .
- **Plastic Cable Ties and Mounts:** Polyamide 6.6 ties can secure individual cables within the tray, preventing slippage and maintaining neat cable routing .

Installation Methods

- **Suspended Mounting with Rods:** Threaded rods suspend the tray from ceilings, allowing easy access for maintenance and keeping cables off the floor . Rod clips or spring clips can attach the tray to these rods.
- **Wall-Mounted Brackets:** Brackets secure trays to walls, ideal for confined spaces or wire mesh basket trays. Clips or clamps can be used to hold cables within the tray .
- **Surface-Mounted Fixing:** For floor-level installations, clips or brackets attach the tray directly to the surface, commonly used in industrial areas .
