

How to plug the fiber optic cable into the router s fiber optic port

AI Overview

Fiber optic cables typically connect to an Optical Network Terminal (ONT) first, which then links to your router via Ethernet, rather than plugging directly into most home routers.

Step 1: Verify Equipment Compatibility

Not all routers can accept a direct fiber optic connection. Check that your router has a fiber-ready port (often labeled SFP, PON, or Fiber). If your router lacks this, you will need an ONT or media converter provided by your ISP to convert the optical signal into an Ethernet signal your router can use .

Step 2: Prepare the Fiber Optic Cable

- Inspect the cable for damage and ensure the connector type matches the ONT or router port (commonly SC/APC or SC/UPC).
- Handle the cable by its plastic housing to avoid touching the glass tip, which is sensitive to dirt and scratches .
- Remove protective dust caps from both the cable and the port before connecting.

Step 3: Connect to the ONT

- Locate the fiber optic wall outlet where your ISP's fiber line enters your home.
- Plug one end of the fiber optic cable into the wall outlet and the other into the ONT's optical input port.
