

I replaced the router and the fiber optic light is red

AI Overview

A red fiber optic (LOS) light indicates a loss of signal between your router and your ISP, often caused by cable issues, service outages, or router misconfiguration.

Understanding the Red LOS Light

The LOS (Loss of Signal) light on your router signals that the device cannot communicate with your Internet Service Provider (ISP). A solid or blinking red light typically means the router is not receiving a proper signal from the fiber optic line, which can result from a damaged cable, loose connections, ISP outages, or a faulty router .

Step-by-Step Troubleshooting

- Check for ISP Outages
- Visit your ISP's website or social media pages to see if there is a known service outage in your area. Sometimes maintenance or technical issues can temporarily disrupt your connection .
- Inspect Fiber Optic Cables
- Examine the fiber optic cable for visible damage, kinks, or sharp bends. Ensure it is securely connected to the router's WAN/ONT port. Avoid bending the cable tightly, as fiber optics are sensitive to stress .
- Verify All Connections
- Check that the power cable, LAN cables, and fiber optic cable are firmly seated. Loose or improperly connected cables are a common cause of signal loss .
