

# Integrated power supply for outdoor base stations

## AI Overview

Integrated power supply systems provide reliable, high-efficiency DC and AC power with backup, monitoring, and environmental protection for outdoor telecom base stations.

### Overview

Integrated power supply systems for outdoor base stations are modular, high-integration solutions designed to deliver stable -48V DC and AC power to telecom equipment, including 4G and 5G base stations. They combine multiple functions—power supply, distribution, backup, protection, and monitoring—into a single cabinet or unit, ensuring uninterrupted operation even in remote or harsh environments .

### Key Components

- **Power Supply Modules:** Convert AC mains to DC (-48V) or provide AC output. High-frequency switching rectifiers are commonly used for efficiency up to 96%-97% .
- **Battery Backup:** Lead-acid or lithium-ion batteries provide uninterruptible power during outages. Systems can include multiple battery banks with temperature-controlled fans and heaters for extreme climates .
- **Power Distribution Units (PDU):** Include AC and DC outputs, surge protection devices (SPD), air switches, and temperature control switches for safe and flexible load management .
