

Intelligent Electronic Distribution Frame

AI Overview

An Intelligent Electronic Distribution Frame (IDF) is a network and power distribution hub that integrates monitoring, management, and automation to optimize connectivity, energy efficiency, and system reliability.

Overview

An Intelligent Electronic Distribution Frame (IDF) serves as a critical intermediary between end devices and the main distribution frame (MDF), efficiently managing both data and power distribution within buildings or campuses . Unlike traditional distribution frames, intelligent IDFs incorporate digital monitoring, automated management, and real-time analytics, enabling enhanced operational efficiency, scalability, and fault detection .
