

Mauritius House Electrical Distribution Box Requirements

AI Overview

Residential electrical distribution boxes in Mauritius must comply with safety standards, provide adequate module capacity, proper earthing, and allow safe access for operation and maintenance.

Key Requirements

1. Module Capacity and Type Distribution boxes for homes in Mauritius typically come in modular configurations, such as Practibox S or Easy9 enclosures. These can range from 4 to 72 modules, with rows of 8, 12, or 18 modules per row, depending on the size of the household electrical system . The boxes must accommodate all types of modular switchgear, including circuit breakers, isolators, and protective devices. 2. Installation and Mounting

- Surface-mounted or flush-mounted options are available. Surface-mounted boxes are easier to access, while flush-mounted cabinets are embedded in masonry walls .
- Boxes must be installed indoors in a dry, accessible location with adequate working space around them for safe operation .
- Adequate lighting should be provided near the distribution box to ensure safe handling . 3. Protection and Safety Standards
- Distribution boxes must have earth terminal blocks for proper earthing .
- The IP protection rating is important: for example, Easy9 enclosures have IP40 when closed and IP30 when open, protecting against accidental contact and dust ingress .
