

Reset Router Fiber Optic Cable

AI Overview

Resetting a fiber optic router or ONT can resolve connectivity issues, slow speeds, and configuration problems by rebooting the device or restoring factory settings.

Understanding the Devices

A fiber optic internet setup typically includes an ONT (Optical Network Terminal) and a router. The ONT converts optical signals from your ISP into electrical signals for your devices, while the router manages your home network and Wi-Fi connections. Issues like intermittent connectivity, slow speeds, or a blinking LOS (Loss of Signal) light may indicate a problem with the router, ONT, or fiber optic cable.

Steps to Reset Your Fiber Router

1. Power Cycle (Simple Reboot)

- Unplug the power cord from the router or ONT.
- Wait 10-30 seconds to allow residual power to discharge.
- Plug the power cord back in and wait for the device to fully restart (usually 1-5 minutes). This method often resolves temporary glitches without affecting your network settings.

2. Factory Reset

- Locate the reset button on the router or ONT. It is usually a small recessed button labeled "Reset" on the back or underside.
- Press and hold the button with a pin or paperclip for 10-15 seconds until the lights flash or the device restarts.
