

Sockets lighting and distribution boxes

AI Overview

Sockets, lighting systems, and distribution boxes form the core of safe and efficient electrical power distribution for residential, commercial, and industrial applications.

Sockets

Sockets are the interface between electrical devices and the power supply. They come in various types depending on voltage, current rating, and application. Industrial-grade sockets often include two-core (220–250V, 16A) and five-core (380–415V, 16–32A) configurations, designed to handle higher loads and ensure safety with built-in circuit breakers. Sockets may also be IP44 or IP54 rated, providing protection against dust and water ingress, making them suitable for damp or outdoor environments.

Lighting Systems

Lighting distribution systems manage the delivery of power to multiple lighting fixtures efficiently. These systems include lighting distribution boxes, marshalling boxes, flex connectors, and plug-in ceiling roses. They support a variety of light sources, including LED lamps, fluorescent bulbs, and specialized LED tubes, and often integrate transformers, LED drivers, and fire hoods for safety and compliance. Properly designed lighting distribution ensures even power delivery, reduces overload risk, and simplifies maintenance.

Distribution Boxes
