

The network cable disconnects when plugged into the access switch

Overview

To fix network connection issues on a switch, start by checking physical connections and cables. Reboot the switch and connected devices. Check for firmware updates and apply if necessary. I haven't been able to reproduce or find any patterns in when this occurs. I could go several days without problems and then have it happen. Common pc issues on the network side frequently start with a loose patch cord, a damaged cable, a bad NIC, or a failing switch port. That is why physical-layer troubleshooting matters. It is the fastest way to separate a true infrastructure fault from a software or configuration problem, and it. A newly installed electric cable that was run parallel to the suspect cable. If you think about it, the Cable Link is just a. The switch makes sure that traffic from one group of ports never gets sent to other groups of ports (which would be routing). VLANs are also described as broadcast domains. This is because of the transparent bridging. Hi folks, sadly I still have a problem with my PC losing network access when I use a network switch.
