

Waterproofing requirements for outdoor electrical distribution box covers

Overview

Key Distinguishing Factor: Unlike indoor distribution panels, outdoor units must meet weatherproofing requirements per NEC Article 312 and environmental ratings per UL 50/50E standards. Selecting the wrong specifications can lead to code violations, premature equipment. Selecting and installing the right protective enclosure ensures long-term electrical safety in demanding environments. And the good news?

You don't need magic. Just the right materials, a thoughtful install, and the discipline to seal what needs. EMI designs and fabricates NEMA 3R rated outdoor electrical enclosures for power distribution units (PDUs) and switchgear to protect your electrical equipment from rain, dust, wind, and temperature fluctuations. A GC who knows their stuff chooses fiberglass enclosures, mounts them 18 inches above the highest potential flood level, and seals all conduit entry points with corrosion-resistant fittings.
