

What is PMCC Power Distribution Box

Overview

PMCC stands for “Power cum Motor Control Centre. ” This panel mixes two main systems. They also help you use energy in a good way. The PMCC panel serves as the main electrical distribution point for your facility's entire power system, while simultaneously providing centralized control and. Power cum Motor Control Centre panel is a combination of Motor Control Centre (MCC) and Power Control Centre (PCC). Necessary safety features along with required accessories are provided for safe operation and. What is a PCC Panel?

(Power Control Center) A PCC Panel (Power Control Center) is an electrical distribution panel that controls the main power supply of an entire system. It contains all the major switchgear, such as: The main circuit breaker is where the incoming power is connected. The MCC Panels are used in industrial and commercial applications for connecting the individual motors for manually, remotely or automatically starting, stopping selecting.
