

What types of cable tray clips are there

AI Overview

Cable tray clips come in various styles designed to secure covers, support trays, and maintain electrical safety, with options including snap-on, clamp, hanging, and no-weld clips.

Common Cable Tray Clip Styles

1. Snap-On Clips These clips are designed to snap onto the side of a cable tray cover, holding it securely without the need for welding or screws. They are typically made from 304 stainless steel, offering corrosion resistance for indoor and some outdoor applications. Snap-on clips are quick to install, reusable, and cost-effective, making them ideal for areas where covers may need frequent removal for maintenance .
2. Clamp or “Number Seven” Clips Shaped like the number seven, these clips slide onto the edge of the tray and clamp the cover in place. Some models may require a screw for a more permanent hold. They provide a stronger, more secure connection than snap-on clips and are suitable for environments with moderate wear and tear .
3. Hanging Clips Hanging clips attach to the sides of a tray to suspend it from threaded rods (1/4", 3/8", or 1/2"). They require nuts and washers for installation and are commonly used in configurations such as curves, slopes, and tees. These clips are ideal for supporting the weight of trays and maintaining alignment in complex routing setups .
4. No-Weld Clips These clips allow for fast installation without welding, using pressure to secure the tray cover. They are particularly useful for quick jobs or temporary setups where covers may need to be removed frequently. They are also made from stainless steel for durability .
