

□Cable tray elbow models□

AI Overview

Cable tray elbows are available in a wide range of types, sizes, and materials, with CAD models downloadable in multiple formats for design and engineering purposes.

Types of Cable Tray Elbows

Cable tray elbows are designed to change the direction of cable runs and are generally categorized as:

- Horizontal Elbows: Change the cable tray direction along the horizontal plane, typically 45° or 90° angles.
- Vertical Elbows: Change the direction along the vertical plane, including inside risers (concave bends) and outside risers (convex bends).
- Specialty Elbows: Custom angles or radius-specific elbows for tight spaces or complex routing .

Sizes and Materials

Elbows are manufactured to match the width and height of the straight cable tray sections. Common dimensions include:

- Heights (H): 50mm, 70mm, 100mm, 120mm
- Widths: Corresponding to standard tray widths, often ranging from 100mm to 600mm or more
- Materials and Finishes: Hot-dip galvanized steel, bare galvanized steel, stainless steel, and powder-coated finishes .
